DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3-6, 9-15 and 17-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Guest (US 6,056,326).

Guest discloses a connector assembly [figure 1] comprising:

- conduit [13];
- a nut [10b];
- a first member [28];
- a second member [19] comprises a friction washer;
- a third member [18] comprises a sealing ring; and
- the arrangement of the first, second, third members and the nut are shown in figures 1, 6

and 9.

The method steps are inherent in the product structure.

Claim Rejections - 35 USC § 103

Art Unit: 2839

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2, 7-8 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guest in view of Lin (US 5,496,076).

Guest discloses the instant claimed invention except for the first member compression ring, and the second member has either triangular or rectangular cross section.

Lin discloses a connector assembly comprises a compression ring [130, figure 4] positioned within a nut [12].

It would have been obvious to one having ordinary skill in the art at the time invention was made to modify the first member of Ono et al. to provide the compression ring as taught by Lin for the purpose of facilitating clamping the pipe.

Guest in view of Lin discloses the instant claimed invention except for the second member has either triangular or rectangular cross section. It would have been an obvious matter of the design choice to have either a triangular or rectangular cross section, since such a modification would have involved a mere change in the shape of a component. A change in shape is generally recognize as being within the level of ordinary skill in the art. In re Dailey, 357 F.2d 669 USPQ 47 (CCPA 1966).

The method steps are inherit in the product structure.
